Seaways - CNTR

- Our global ocean freight services will cover both import and export services requirements by container for both consolidations (LCL) and (FCL), Our specialists are ready to respond to your inquiries in order to find for you the proper option to deliver the cargo worldwide. Contractual price, terms and conditions with leading carriers and handling of oversized shipments as special equipment

Seaways - Bulk

- The department of Ship Chartering and brokering of Casrote with experience of chartering vessel process is ready to find you proper vessel based on your shipment's requirement based on time and voyage chartering for any of below vessel types:
 1. **Bulk and Breakbulk**
 2. **Tanker**
 3. **Ro-Ro**
- A bulk carrier or bulker is a merchant ship specially designed to transport unpackaged bulk cargos, such as grains, coal, ore, steel coils, and cement, in its cargo holds.
- Today's bulk carriers are specially designed to maximize capacity, safety, efficiency, and durability.
- Today, bulk carriers make up 21% of the world's merchant fleets. Over half of all bulk carriers have Greek, Japanese, or Chinese owners and more than a quarter are registered in Panama. South Korea is the largest single builder of bulk carriers, and 82% of these ships were built in Asia.

Railways

- We are using all available railways infrastructure of Iran for inland services and others countries, such as CIS, China, Middle East, and part of Europe and with different dedicated wagons.
- Also, we're serving rail services for transit shipments from CIS to Persian Gulf countries via bandar Abbas. we have built a bridge between CIS to others countries.
- For many companies Rail Cargo is the starting point in the search for possibilities regarding rail freight market, complex and high-level services are provided with the available modern equipment and tailored made advice with specific presentation.

Roadways

- European market leader and distribution includes door-to-door movement of full trailer loads of freight, and consolidation of small consignments into full loads for warehouse-to-warehouse trucking and thence delivery to the consignee.

Airways

- The use of scheduled airlines for the movement of freight has increased considerably following the introduction of wide-bodied aircraft. Concentrated around major international airports, airfreight forwarders provide a high-quality range of services worldwide for urgent and high value freight, and just-in-time stock systems. They also provide airport handling and distribution services, and act as general sales agents for airlines.

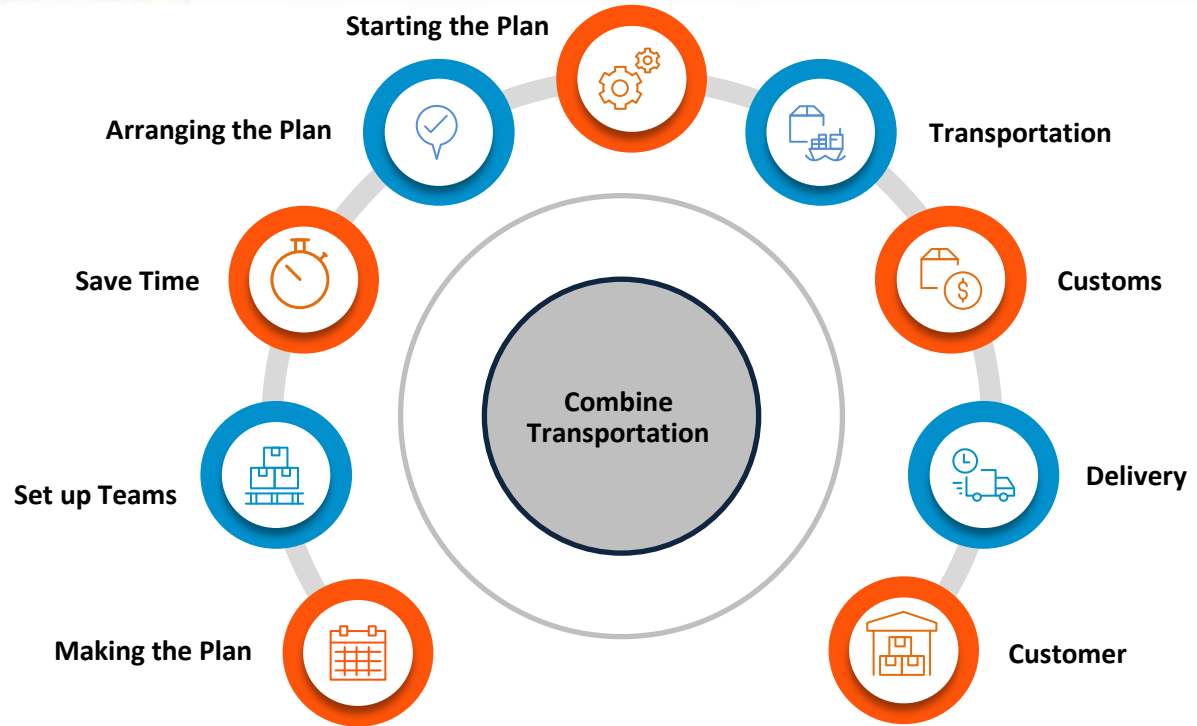

Logistics Team:

- Logistics is the management of the flow of goods between the point of origin and the point of consumption in order to meet some requirements, of customers or corporations.
- The resources managed in logistics can include physical items, such as food, materials, equipment, and liquids with different packing. The logistics of physical items usually involves the integration of information flow, material handling, production, picking up, packaging, inventory, stuffing, lashing, warehousing, customs, transportation, security and deliver to CNEE. The complexity of logistics can be modeled, analyzed, visualized, and optimized by dedicated simulation software. The minimization of the use of resources is a common motivation in logistics for import and export.
